EDUCATIONAL OBJECTIVES

Clinical guidelines are statements including recommendations intended to optimize patient care. Being based on systemic reviews, guidelines become outdated as new evidence is published, so requiring a constant reassessment. According to a recent review, 1 out of 5 recommendations are outdated after 3 years (Garcia LM. CMAJ 2014;186: 1211–1219).

Based on this concept, Venous-lymphatics World International Network Foundation (vWIN) is organizing international chapter meetings where welcoming different sessions dedicated to different guidelines analysis. Since one of the vWIN aims is the involvement of younger generations, the current guidelines will be presented by under 40 yo speakers from all over the world. At the same time, since 1 out of 5 recommendations is outdated after 3 years, 5 so called “Masters” per session are involved. Masters are world renown experts who will critically analyse the guidelines, with the hope that at least one of them will identify the 1 out of 5 outdated recommendation.

A document including the sum up of the most renown “masters” brainstorming will be submitted to an indexed journal.

Evidence-based Innovation is another milestone in vWIN foundation vision. For this reason, the sessions are enriched also with the latest scientific data on different topics. Considering the top quality of the faculty, these data will be presented in few minutes, leaving 30 minutes for heated and productive discussion on what’s new on the field.

In parallel sessions, hands-on activities, instructions for users and innovations from the world will be run by the most renown experts. Last but not least, considering that international teamwork is in the same vWIN foundation origin, sessions dedicated to the best investigations produced by the different international scientific societies will offer the chance for a glance at what the different continents are focusing on. The same networking will be further fostered thanks to flight stipends given as award to the best under 40yo scientific presentations. In conclusion, the vision is to bring the highest science up on the highest Italian Alps, where gliding on the guidelines all together, during scientifically and socially enjoyable vWINter days.
